# CADACUS
## SOLUTIONS
## FOR SYSPRO

## Summarized Invoices Solution

## Vendor Purchase Order Solution

## RMA Capture Solution

## Shipment Import Solution

**Cadacus** **Summarized Invoices Solution for SYSPRO** summarizes multiple sales orders together to produce a single invoice. Unlike the SYSPRO invoice consolidation, each stock code is summarized into a single line on the final invoice. The solution integrates with the **Shipping Solution** **for SYSPRO** to allow easy summarization based on consolidated shipments. EDI orders with multiple ship-to locations are quickly consolidated to a single invoice.

**Cadacus** **Vendor Purchase Order Solution for SYSPRO** automatically creates drop-ship purchase orders based on incoming EDI orders. The solution can be integrated with the **EDI Solution** **for SYSPRO** to be auto-triggered from the EDI purchase order import.

**Cadacus** **RMA Capture Solution for SYSPRO** helps automate the receiving of return product. Designed as a front-end for the SYSPRO RMA module, this solution enables large quantities of product to be scanned, checked and validated against an RMA. Optionally, the system will populate the RMA based on the actual returned product. This is the perfect solution for handling large shelf refreshes.

**Cadacus** **Shipment Import Solution for SYSPRO** is a fast and easy way to return third-party warehouse shipment information into SYSPRO and provide ASN and shipment information to the **EDI Solution** **for SYSPRO**. All your warehousing partner needs to provide is a standard XML-formatted document and the import will update your SYSPRO sales order, as well as provide the information for EDI documents.
